

DSL Transfer Process Participants

telstrawholesale.com

The DSL transfer process provides an efficient one step mechanism for moving DSL end-users/customers between DSL service providers, rather than the more time consuming disconnection/reconnection process.

The DSL transfer process can only be used to transfer DSL services between service providers that provide DSL services over Telstra's DSL network and participate in the DSL transfer process. Transfers of DSL services between Telstra's DSL network and other networks can only be performed using the disconnection/reconnection process.

End-users/customers should check with their current DSL service provider if they have queries about whether their DSL service can be transferred using the DSL transfer process.

As of the **24th of August 2006**, the following service providers had signed up to the DSL transfer process:

Service Provider Name

aaNet Communications Pty Ltd
